Meme Sabotage is a two player game using the mouse and keyboard. With the new law outlined in Article 13, sharing memes on the internet in the EU will lead to copyright strikes. Keeping Article 13 in mind, Meme Sabotage has players attempt to sabotage their friends by hacking memes into their home desktops. Players take turns as the Hacker and the Remover and change roles within the two rounds of 2 minutes each.

The Hacker uses the keyboard as their controller and must add as many memes into the Remover's four desktops before the Eu bots check the Remover's pc for inspection. The Hacker can create an incognito window into one of the 4 desktops by pressing i, and then they can began uploading memes by pressing m. The problem is that the Hacker can only upload memes under a incognito window so if the Remover clicks the incognito window off then the Hacker will have to add another incognito to begin adding memes again. The incognito window can only be added back every 5 seconds or so. Lastly, the remove is displayed on screen as a red virus bug, and if the Clicker clicks on it, all memes on all desktops are removed. The Hacker must keep moving to avoid being clicked and use memes as shields from being clicked on.

The Remover uses the mouse as their controller and must click off has many memes as they can before the round is over. The Remover must click off an incognito to stop the Hacker from adding memes and so they can click on those memes to remove them. The Jackpot that The Remover aims for is the Hacker's virus as doing so will remove all memes in the game. However, it's up to the Remover if they want to chase the virus or click off any memes on the screen that they see more threatening.

At the end of each two minute round, the current player playing as The Remover will have the total meme count added to the scoreboard. At the end of the game both scores will be taking into comparsent and the player with the most memes will lose the game. The player with the most memes will be arrested for illegal meme possession by the EU making the player with the less memes be left off the hook.

In terms of Aesthetics the game uses a ton of teleptale meme images that I found online. Also I found many Eu like images and computer based images like the windows xp desktop and incognito window image. Most the sounds are all computer based for when anything is click on. Lastly, I added 7 random meme based songs that would fit the tone of the game. These songs range from Sunstroke Project & Olia Tira - Run Away (also known as

the Sax guy song) to a terrible recorder recreation of My Heart Will Go On. Please see the links under songs from more details.

However adding songs came with a draw back, the program could not load the mp3 or wav files fast enough before the player can hit the start button. This resulting in the console getting mad saying there was nothing there so to fix this I added a loading screen to the start of the game to allow all audio files to loud before the game begins. Ultimately I'm okay with having a loading screen if that means the game can be played with fun popping audio.
